Subject: Request for List of Unallowable Items for Open Detonation
Attachments: Pages from RCRA Part B.pdf; smime.p7s

Camille,

After looking through the documentation I have there is not a "list" of items that are not allowed to be detonated at Eglin. All of the focus is on defining what is allowed to be detonated.

I have highlighted some areas in the original permit application under II.B Waste Characteristics, that explains what can be detonated and the constituents that make up what can be detonated. All other types of RCRA wastes or any other types of wastes are not allowed.

If you have any other questions please let me know.
